Allegato 2- A

Ricostruzione dei deflussi tramite bilancio idrico dei laghi artificiali

BAU PRESSIU

◆ *Dati grezzi messi a disposizione*

Curva d'invaso	<input type="checkbox"/>
Curva specchio liquido	<input type="checkbox"/>
Quote d'invaso	<input type="checkbox"/>
Volumi d'invaso	<input checked="" type="checkbox"/>
Erogazioni alle utenze	<input checked="" type="checkbox"/>
Evaporazione	<input type="checkbox"/>
Scarichi	<input type="checkbox"/>
Sfiori	<input type="checkbox"/>

- Quote d'invaso e volumi d'invaso con passo giornaliero per il periodo 1 Lug 97 – 31 Ott 03
- Volumi d'invaso ad inizio mese per il periodo Gen 92 – Dic 03
- Erogazioni giornaliere potabile ESAF dal 1 Gen 92 al 31 Dic 03
- Valutazione delle perdite nei drenaggi e delle infiltrazioni fra i conci
- Assente curva d'invaso e curva specchio liquido
- Assente la stima dell'evaporazione
- Assenti sfiori e scarichi

◆ *Considerazioni*

- A causa dell'assenza degli scarichi e degli sfiori l'analisi di ricostruzione risulta incompleta. Ciò nondimeno la lettura dei volumi d'invaso relativi al periodo con passo giornaliero 1 Lug 97 – 31 Ott 03 evidenzia un possibile sfioro compreso tra i giorni 8 e 18 marzo 2003. Per quanto concerne i dati di volume rimanenti, tutti di inizio mese, si può ipotizzare un probabile episodio di sfioro nel Gen 1997. Complessivamente dunque l'assenza dei due probabili picchi potrebbe non compromettere in modo significativo la media generale mentre altera la stima dei massimi valori di deflusso.
- Sono risultati assenti i dati sui volumi invasati dei mesi di marzo e aprile 1993. In mancanza di altra possibile indicazione sono stati assunti i dati interpolati tra i mesi di febbraio e maggio.
- La mancanza della curva d'invaso non ha consentito la ricostruzione della curva dello specchio liquido per cui la stima dell'evaporazione è proceduta con il dato utilizzato per il Piano Stralcio Direttore di Bacino ovvero:

curva specchio liquido: $S=0.131 V^{0.677}$

altezza annua di evaporazione: portata da 1.5 a 2 m annui

ripartizione mensile:	gen	feb	mar	apr	mag	giu	lug	Ago	set	ott	nov	dic
	0.033	0.038	0.057	0.066	0.103	0.123	0.165	0.152	0.104	0.069	0.055	0.038

- Alcuni bilanci estivi sono risultati negativi. La stima dell'evaporazione è una possibile sottostima dell'erogazione estiva. Ad ogni modo in tali casi il deflusso viene imposto nullo.
- Nonostante i limiti e la verosimile sottostima del deflusso si ritiene di riportare comunque i risultati ottenuti.

◆ *Risultati*

Segue la tabella dei dati ricostruiti mensili espressi in Mmc per il periodo 1992 - 2003, un quadro sintetico delle statistiche significative del periodo analizzato, un quadro sintetico di analisi pluriennale dei deflussi, il confronto con i dati di deflusso dedotti dalla serie adottata per il Piano Stralcio Direttore di Bacino.

BIDIGHINZU

◆ *Dati grezzi messi a disposizione*

Curva d'invaso	<input type="checkbox"/>
Curva specchio liquido	<input type="checkbox"/>
Quote d'invaso	<input type="checkbox"/>
Volumi d'invaso	<input checked="" type="checkbox"/>
Erogazioni alle utenze	<input checked="" type="checkbox"/>
Evaporazione	<input type="checkbox"/>
Scarichi	<input checked="" type="checkbox"/>
Sfiori	<input checked="" type="checkbox"/>

- Volumi d'invaso con passo mensile per il periodo GEN 92 – DIC 03
- Erogazioni mensili all'utenza potabile
- Apporti mensili dal Mannu di Porto Torres
- Apporti mensili dal Temo
- Scarichi di fondo,
- Sfiori

◆ *Considerazioni*

- La mancanza della curva d'invaso e dei livelli del lago non ha consentito la verifica puntuale dei valori dei volumi d'invaso
- La mancanza della curva d'invaso non ha consentito la ricostruzione della curva dello specchio liquido per cui la stima dell'evaporazione è proceduta con il dato utilizzato per il Piano Stralcio Direttore di Bacino ovvero:

curva specchio liquido: $S=0.228 V^{0.792}$

altezza annua di evaporazione: portata da 1.5 a 2 m annui

ripartizione mensile: gen feb mar apr mag giu lug Ago set ott nov dic
 0.033 0.038 0.057 0.066 0.103 0.123 0.165 0.152 0.104 0.069 0.055 0.038

- Si registra una grave assenza dell'entità dello sfioro nei mesi di aprile e maggio 1996 a causa della quale consegue una sottostima ignota del deflusso. Tuttavia si osservi come la mancanza di soli due dati completi in undici anni di deflussi possa risultare poco influente ai fini di un condizionamento significativo della media generale. Viene altresì verosimilmente perduto il valore massimo tra i deflussi registrati.

- Alcuni bilanci estivi sono risultati leggermente negativi. Al di là dell'entità dell'evaporazione potrebbe trattarsi anche di una possibile sottostima dell'erogazione estiva. Ad ogni modo in tali casi il deflusso viene imposto nullo.

◆ *Risultati*

- Seguono la tabella dei dati ricostruiti mensili espressi in Mmc per il periodo 1992 - 2003, un quadro sintetico delle statistiche significative del periodo analizzato, un quadro sintetico di analisi pluriennale dei deflussi, il confronto con i dati di deflusso dedotti dalla serie adottata per il Piano Stralcio Direttore di Bacino.

◆ *Dati grezzi messi a disposizione*

Curva d'invaso	<input checked="" type="checkbox"/>
Curva specchio liquido	<input checked="" type="checkbox"/>
Quote d'invaso	<input checked="" type="checkbox"/>
Volumi d'invaso	<input checked="" type="checkbox"/>
Erogazioni alle utenze	<input checked="" type="checkbox"/>
Evaporazione	<input checked="" type="checkbox"/>
Scarichi	<input checked="" type="checkbox"/>
Sfiori	<input checked="" type="checkbox"/>

- I dati sono a passo giornaliero dal 01-gen-90 al 30-set-03.

◆ *Considerazioni*

- Il bilancio alla sezione si chiude con una certa frequenza con valori negativi. Dall'esame delle differenze mensili cumulate per tutto il periodo di osservazione, si evince una notevole incidenza di tali valori nei mesi compresi fra maggio ed ottobre, così come si osserva nelle tabelle e grafici che seguono.

Supposto che la valutazione dell'evaporazione sia da ritenersi ben approssimata (validata da misure su vasca operate dall'Ente Autonomo del Flumendosa), si può attribuire in modo assolutamente prevalente la rilevanza dei termini negativi di bilancio alla mancata o non precisa misura dell'erogazione, soprattutto per il periodo succitato maggio-settembre.

Nei casi di bilancio (effettuato su passo giornaliero) non nullo è stato imposto un valore nullo al deflusso, intendendo con ciò sottolineare la notevole affidabilità delle letture di invaso e attribuendo di conseguenza soprattutto alla imprecisa misura dell'erogazione la perdita di invaso registrata. Dubbi più seri si hanno per le ricostruzioni nei mesi da ottobre ad aprile per i quali si può ammettere invece un non precisato fattore di sottostima del deflusso che verosimilmente potrebbe essersi attestato su valori non nulli.

- Non si possiedono dati sul bacino montano con sezione di chiusura a Punta Gennarta. Nel computo dei dati di raffronto verrà escluso il deflusso relativo al bacino totale a Punta Gennarta. Con tale operazione non si ritiene comunque di commettere particolari errori di sottostima dato che gli eventi di sfioro del lago risultano rarissimi.
- Non si possiedono dati circa l'entità della derivazione dalla presa sulla traversa del S.Giovanni. Tale circostanza causa inevitabili errori di sottostima. Si consideri comunque che la portata massima derivabile dalla traversa è di 600 l/s che a pieno regime potrebbe derivare per la suddetta sezione circa 1,5 Mmc all'anno.

◆ *Risultati*

- Seguono la tabella dei dati ricostruiti mensili espressi in Mmc per il periodo 1992 - 2003, un quadro sintetico delle statistiche significative del periodo analizzato, un quadro sintetico di analisi pluriennale dei deflussi, il confronto con i dati di deflusso dedotti dalla serie adottata per il Piano Stralcio Direttore di Bacino.

COGHINAS MUZZONE

◆ *Dati grezzi messi a disposizione*

Curva d'invaso	<input checked="" type="checkbox"/>
Curva specchio liquido	<input type="checkbox"/>
Quote d'invaso	<input checked="" type="checkbox"/>
Volumi d'invaso	<input checked="" type="checkbox"/>
Erogazioni alle utenze	<input checked="" type="checkbox"/>
Evaporazione	<input type="checkbox"/>
Scarichi	<input checked="" type="checkbox"/>
Sfiori	<input type="checkbox"/>

- Quote d'invaso giornaliere dal 18 Lug 92 al 31 Dic 03
- Volumi d'invaso associati alle quote suddette
- Derivazioni mensili non complete da Gen 88 a Dic 03
- Scarichi giornalieri dal 18 Lug 92 al 31 Dic 03
- Curva d'invaso con passo 1 m

◆ *Considerazioni*

- I dati dei volumi d'invaso forniti non corrispondono a quelli verificati puntualmente sulla curva d'invaso mediante interpolazione lineare. La differenza fra i due tipi di dato risulta scostante e molto significativa per valori di livello prossimi alla capacità del serbatoio attestandosi attorno ai 20 Mmc. Presupponendo la bontà delle quote si è deciso di utilizzare i volumi dedotti puntualmente dalla curva d'invaso.
- Dalla curva d'invaso si è operata la ricostruzione della curva dello specchio liquido mediante i seguenti tre rami di curva di espressione esponenziale mediante procedura di regressione:

$$0 < h \leq 140 \quad S = 0.3302 V^{0.97718}$$

$$140 < h \leq 150 \quad S = 0.2133 V^{0.9635}$$

$$h > 150 \quad S = 0.1296 V^{0.9312}$$

inoltre è stato imposto:

altezza annua di evaporazione: 1.7 m

ripartizione mensile:

gen	feb	mar	apr	mag	giu	lug	ago	set	ott	nov	dic
0.033	0.038	0.057	0.066	0.103	0.123	0.165	0.152	0.104	0.069	0.055	0.038

- Le derivazioni sono incomplete mancando i seguenti periodi:

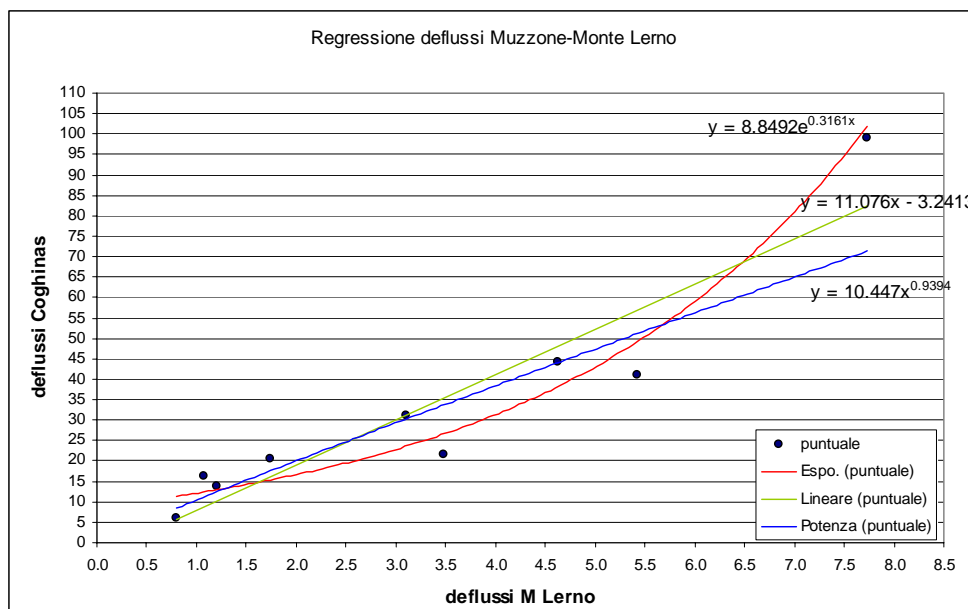

Nov- Dic 1988; Gen – Dic 1989; Lug – Ott 1991; Gen 1996; Apr 1998

Per sono stati scartati dal bilancio gli anni 1988, 1989, 1990 ed il 1991 fino al mese di ottobre non compreso.

La grandissima variabilità dei dati di derivazione non consente alcuna ipotesi facilmente deducibile per i mesi di Ott 91; Gen 1996; Apr 1998. Per il mese di Ott 91 la derivazione viene comunque tenuta nulla in quanto dal bilancio risulta un apporto positivo di 16.6 Mmc (per cui potrebbe trattarsi di una interruzione di produzione idroelettrica programmata) con un volume d'invaso a fine mese di 203.4 Mmc (e quindi lontano dai 244 di piena capacità) e con assenza di scarichi. Discorso analogo viene proposto per il mese di Gen 1996 (bilancio con un deflusso di +43.6 Mmc, assenza di scarico) e per il rimanente mese di Apr 1998 (bilancio con un deflusso di +15.4 Mmc, assenza di scarico).

- Il bilancio si chiuso in modo particolarmente negativo per le estati del '92 (11.4 Mmc), del '93 (4.5 Mmc), del '94 (6.7 Mmc). Non risulta verosimile che il problema derivi dalla stima dell'evaporazione che mediamente si attesta a 24.00 Mmc/anno e inoltre se così fosse l'anomalia dovrebbe presentarsi in modo ricorrente. Potrebbe trattarsi invece di una non precisa valutazione delle derivazioni. Tenute presenti le considerazioni precedenti sulla variabilità delle derivazioni e nel tentativo di operare una ricostruzione affidabile del deflusso si è pensato di affiancare al dato derivante dall'assunzione di deflusso nullo in concomitanza di bilancio negativo, quello derivato sulla base di una curva interpolazione diretta dei deflussi del periodo maggio-ottobre, tra il bacino del Coghinas a Muzzone e il bacino montano del Mannu di Pattada a Monte Lerno. Tra le varie varie curve derivate è sembrata più cautelativa quella di forma esponenziale:

$$\text{Def}(\text{cogh}) = 8.8492 e^{0.3161 \text{ Def}(\text{ML})}$$

E

	defl cogh	defl M lern	defl. Atteso	diff
1991\1992	24.05	4.53	37.05	13.00
1992\1993	9.46	2.81	21.51	12.05
1993\1994	4.79	2.05	16.92	12.13

' di seguito elencato il confronto tra i due tipi di dato

◆ *Risultati*

Seguono la tabella dei dati ricostruiti mensili espressi in Mmc per il periodo 1992- 2003, un quadro sintetico delle statistiche significative del periodo analizzato, un quadro sintetico di analisi pluriennale dei deflussi, il confronto con i dati di deflusso dedotti dalla serie adottata per il Piano Stralcio Direttore di Bacino.

I deflussi si riferiscono al bacino parziale del Coghinas con l'aggiunta del bacino del Mannu di Mores. Il dato è stato ricavato ricostruendo il bilancio alla sezione di Muzzone e sottraendogli gli scarichi provenienti da Monte Lerno nell'ipotesi che questi siano giunti per intero al serbatoio. L'entità degli scarichi è riferita al bilancio effettuato per la sezione di Monte Lerno.

CORONGIU III

◆ *Dati grezzi messi a disposizione*

Curva d'invaso	<input type="checkbox"/>
Curva specchio liquido	<input type="checkbox"/>
Quote d'invaso	<input type="checkbox"/>
Volumi d'invaso	<input type="checkbox"/>
Erogazioni alle utenze	<input checked="" type="checkbox"/>
Evaporazione	<input checked="" type="checkbox"/>
Scarichi	<input type="checkbox"/>
Sfiori	<input type="checkbox"/>

- Volumi d'invaso con passo mensile per il periodo Mar 91 – Feb 99
- Erogazioni mensili alle utenze riferito allo stesso periodo di tempo
- Dati di evaporazione fino a Ott 97. La stima è assente e i dati si presentano irregolari

◆ *Considerazioni*

- L'assenza della curva d'invaso rende impossibile la verifica dei volumi d'invaso e la possibile ricostruzione della curva dello specchio liquido
- Dall'analisi dei livelli di fine mese si intuisce il raggiungimento del volume di massimo invaso negli anni 1991, 1992, 1993, 1996, 1997

◆ *Risultati*

Non sembra possibile operare una ricostruzione affidabile del bilancio alla sezione dello sbarramento essendo assenti scarichi, sfiori e curva d'invaso.

FLUMENDOSA (ALTO E MEDIO) + MULARGIA

◆ *Dati grezzi disponibili*

Curva d'invaso	<input checked="" type="checkbox"/>
Curva specchio liquido	<input checked="" type="checkbox"/>
Quote d'invaso	<input checked="" type="checkbox"/>
Volumi d'invaso	<input checked="" type="checkbox"/>
Erogazioni alle utenze	<input checked="" type="checkbox"/>
Evaporazione	<input checked="" type="checkbox"/>
Scarichi	<input checked="" type="checkbox"/>
Sfiori	<input checked="" type="checkbox"/>

- I dati sono riferiti al periodo ott 88 – set 03

◆ *Considerazioni*

- Il materiale consegnato è l'elaborato di bilancio prodotto dai tecnici dell'Ente Autonomo del Flumendosa. Il bilancio è chiuso subito a valle della sezione di incontro del Mulargia con il Flumendosa e pertanto vengono computati i deflussi dell'intero bacino totale del Flumendosa (Alto e Medio Flumendosa) e gli apporti del Mulargia. Sono invece sottratti dal computo i trasferimenti in galleria dal Flumineddu al lago di Nuraghe Arrubiu e sono stati debitamente tenuti in conto i volumi turbinati dall'Alto Flumendosa per la produzione di energia elettrica.

◆ *Risultati*

- Seguono la tabella dei deflussi mensili espressi in Mmc per il periodo 1988- 2003, un quadro sintetico delle statistiche significative del periodo analizzato, un quadro sintetico di analisi pluriennale dei deflussi, il confronto con i dati di deflusso dedotti dalla serie adottata per il Piano Stralcio Direttore di Bacino.

GOVOSSAI

◆ *Dati grezzi messi a disposizione*

Curva d'invaso	<input checked="" type="checkbox"/>
Curva specchio liquido	<input type="checkbox"/>
Quote d'invaso	<input checked="" type="checkbox"/>
Volumi d'invaso	<input type="checkbox"/>
Erogazioni alle utenze	<input checked="" type="checkbox"/>
Evaporazione	<input type="checkbox"/>
Scarichi	<input type="checkbox"/>
Sfiori	<input type="checkbox"/>

- Curva d'invaso con passo unitario di 2 m
- Quote d'invaso con passo giornaliero per il periodo 1 Gen 92 – 31 Dic 03
- Erogazioni mensili dal Gen 96 al Nov 03

◆ *Considerazioni*

- Dall'analisi dei livelli giornalieri si deduce il raggiungimento costante della quota massima di ~ 918.2 per il periodo 1992-1998. Dal 1999 al 2003 le quote massime registrate risultano inferiori

◆ *Risultati*

La mancanza di informazioni più precise in particolare riguardo all'andamento delle quote e l'assenza degli scarichi e sfiori non consente una ricostruzione affidabile del bilancio.

IS BARROCUS

◆ *Dati grezzi disponibili*

Curva d'invaso	<input checked="" type="checkbox"/>
Curva specchio liquido	<input checked="" type="checkbox"/>
Quote d'invaso	<input checked="" type="checkbox"/>
Volumi d'invaso	<input checked="" type="checkbox"/>

Evaporazione	<input checked="" type="checkbox"/>
Scarichi	<input checked="" type="checkbox"/>
Sfiori	<input checked="" type="checkbox"/>

- I dati sono riferiti al periodo SET 92 – DIC 03;
- Dati presenti con passo giornaliero se si esclude il dato relativo alle erogazioni a partire dal 1 gen 98 fino al 31 dic 2003, per le quali sono presenti i valori mensili.

◆ *Considerazioni*

- Dal settembre 1991 al dicembre 1992 l'invaso è caratterizzato da volumi praticamente nulli che segnalano il periodo di avvio di funzionamento della struttura;
- Errore nel valore del volume invasato del 25/04/92 stabilito in 6.785;
- Assenza del dato di misura per tutto il mese di aprile 94. Per il dato di fine mese viene assunto il valore del 1 maggio 94;
- Assenza del dato di misura per tutto il mese di giugno 96. Per il 30/06/95 si assume il dato di volume del 01/07/95 pari a 1.208;
- Il dato del 31/03/96 risulta palesemente errato; viene sostituito con il dato di volume del giorno 01/04/96 pari a 7.78;
- Assenza dei dati di misura dal 02/04/96 fino al 29/04/96;
- Assenza del dato di erogazione da maggio 95 a settembre 95. E' verosimile che tale dato sia totalmente nullo in considerazione del bassissimo livello di invasato del lago.
- Alcuni bilanci mensili sono risultati leggermente negativi. La stima dell'evaporazione e una possibile sottostima dell'erogazione sono da imputarsi come cause più probabili. In tali casi il deflusso viene imposto nullo. Si

rammenta che tale impostazione risulta comunque cautelativa poiché impone un valore di deflusso mensile nullo probabilmente sottostimato.

◆ *Risultati*

- Seguono la tabella dei dati ricostruiti mensili espressi in Mmc per il periodo 1990- 2003, un quadro sintetico delle statistiche significative del periodo analizzato, un quadro sintetico di analisi pluriennale dei deflussi, il confronto con i dati di deflusso dedotti dalla serie adottata per il Piano Stralcio Direttore di Bacino.

LENI

◆ *Dati grezzi messi a disposizione*

Curva d'invaso	<input checked="" type="checkbox"/>
Curva specchio liquido	<input type="checkbox"/>
Quote d'invaso	<input type="checkbox"/>
Volumi d'invaso	<input checked="" type="checkbox"/>
Erogazioni alle utenze	<input checked="" type="checkbox"/>
Evaporazione	<input checked="" type="checkbox"/>
Scarichi	<input checked="" type="checkbox"/>
Sfiori	<input checked="" type="checkbox"/>

- Volumi d'invaso con passo mensile per il periodo Ott 90 – Set 03
- Erogazioni mensili all'utenza potabile
- Erogazioni mensili all'utenza industriale
- Erogazioni mensili all'utenza irrigua
- Scarichi di fondo, sfiori, evaporazione e perdite tutti accorpati in un'unica voce e con passo mensile

◆ *Considerazioni*

- Il materiale consegnato non rappresenta un quadro di dati grezzi ma già un elaborato di bilancio che, soprattutto per quanto attiene all'entità del deflusso, si considera ragionevolmente affidabile. Tale dato deriva infatti dalla elaborazione delle misure giornaliere (o anche di maggior frequenza durante eventi di piena) operate dal gestore dell'invaso sulle soglie delle traverse del rio Leni (bacino sotteso 40 km²) e del rio Bidda Scema (bacino sotteso 24.4 km²). Il deflusso del rimanente bacino parziale di 9 km² a monte della diga è ricostruito proporzionalmente all'area con rapporto diretto essendoci una perfetta similitudine delle caratteristiche di altitudine, di uso del suolo e geomorfologiche rispetto ai due più bacini montani.

In conclusione ci si è limitati ad operare una verifica puntuale dei dati forniti e si è potuto così osservare che in qualche mese il bilancio non risulta perfettamente chiuso. Tuttavia la distribuzione dell'errore è tale che ad uno scarto positivo segue quasi subito un identico scarto negativo nel mese successivo o viceversa, per cui l'errore complessivo nell'arco del bimestre è mediamente nullo. Si è scelto perciò di conservare inalterato il dato di partenza.

◆ *Risultati*

- Seguono la tabella dei dati ricostruiti mensili espressi in Mmc per il periodo 1990- 2003, un quadro sintetico delle statistiche significative del periodo analizzato, un quadro sintetico di analisi pluriennale dei deflussi, il confronto con i dati di deflusso dedotti dalla serie adottata per il Piano Stralcio Direttore di Bacino.

LISCIA

◆ *Dati grezzi messi a disposizione*

Curva d'invaso	<input type="checkbox"/>
Curva specchio liquido	<input type="checkbox"/>
Quote d'invaso	<input checked="" type="checkbox"/>
Volumi d'invaso	<input checked="" type="checkbox"/>
Erogazioni alle utenze	<input checked="" type="checkbox"/>
Evaporazione	<input type="checkbox"/>
Scarichi	<input checked="" type="checkbox"/>
Sfiori	<input type="checkbox"/>

- Quote d'invaso con passo giornaliero per il periodo 1 Gen 92 – 31 Dic 03
- Volumi d'invaso associati alle quote
- Erogazioni giornaliere alle utenze dal 1 Gen 92 al 31 Dic 03
- Scarichi giornalieri dal 1 Gen 92 al 31 Dic 03

◆ *Considerazioni*

- La mancanza della curva d'invaso non ha consentito la verifica puntuale dei valori dei volumi d'invaso
- La mancanza della curva d'invaso non ha consentito la ricostruzione della curva dello specchio liquido per cui la stima dell'evaporazione è proceduta con il dato utilizzato per il Piano Stralcio Direttore di Bacino ovvero:

curva specchio liquido: $S=0.21 V^{0.706}$

altezza annua di evaporazione: 1.5 m

ripartizione mensile:

	gen	feb	mar	apr	mag	giu	lug	ago	set	ott	nov	dic
	0.033	0.038	0.057	0.066	0.103	0.123	0.165	0.152	0.104	0.069	0.055	0.038

- Nelle erogazioni industriali ed irrigue risulta un buco relativo all'intero mese di marzo e aprile 2003. Poiché sembrava utile non perdere uno dei dieci anni a disposizione si è ritenuto di operare una ricostruzione dell'erogazione assimilando il dato mancante al dato presente che presentava le maggiori affinità complessive. In tal senso sono stati scelti i mesi di marzo e aprile 1996 poiché degli anni 1996 e 2003 risultano molto prossimi tra loro i dati di invaso nei mesi immediatamente precedenti e successivi al suddetto periodo. Nei succitati mesi risultano peraltro molto vicine fra loro le stesse erogazioni, tenendo anche conto del fatto che comunque nella maggioranza degli anni affini a disposizione la somma delle erogazioni industriali ed irrigue dei

mesi di marzo e aprile si attesta all'interno dell'intervallo 1,3 - 1,5 Mmc. Nel caso in questione l'erogazione ipotizzata è pari a 1,364 Mmc.

- Palesemente errata la trascrizione del dato del 24/05/03 segnato come 25'152'000 e convertito in 52'152'000
- L'effettuazione del bilancio su base giornaliera consente di ridurre al minimo l'errore causato dalle possibili distorsioni del dato originale. Qualora il bilancio sia risultato negativo il valore del deflusso è stato posto uguale a zero. L'inconveniente può essere reso possibile da vari fattori tra cui una trascrizione non precisa dello stato d'invaso, una possibile sottostima dell'erogazione, una stima non attendibile dell'evaporazione. Si ricorda altresì che l'operazione di annullamento del deflusso costituisce generalmente una sottostima dell'entità della grandezza stessa.

◆ *Risultati*

Seguono la tabella dei dati ricostruiti mensili espressi in Mmc per il periodo 1992- 2003, un quadro sintetico delle statistiche significative del periodo analizzato, un quadro sintetico di analisi pluriennale dei deflussi, il confronto con i dati di deflusso dedotti dalla serie adottata per il Piano Stralcio Direttore di Bacino.

MONTE LERNO

◆ *Dati grezzi messi a disposizione*

Curva d'invaso	<input type="checkbox"/>
Curva specchio liquido	<input type="checkbox"/>
Quote d'invaso	<input type="checkbox"/>
Volumi d'invaso	<input checked="" type="checkbox"/>
Erogazioni alle utenze	<input checked="" type="checkbox"/>
Evaporazione	<input checked="" type="checkbox"/>
Scarichi	<input checked="" type="checkbox"/>
Sfiori	<input type="checkbox"/>

- Volumi d'invaso con passo mensile per il periodo Gen 92 – Dic 03
- Erogazioni mensili dalla presa irrigua per il medesimo intervallo di tempo
- Erogazioni mensili potabili per il medesimo intervallo di tempo
- Scarichi di fondo mensili per il medesimo intervallo di tempo
- Stima mensile dell'evaporazione per il medesimo intervallo di tempo

◆ *Considerazioni*

- Il materiale consegnato non rappresenta un quadro di dati grezzi ma già un elaborato di bilancio
- La mancanza delle quote dei livelli di invaso e della stessa curva d'invaso non ha consentito la verifica puntuale dei valori dei volumi
- La mancanza della curva d'invaso non ha consentito la ricostruzione della curva dello specchio liquido per cui, a titolo di confronto, si è provveduto alla stima dell'entità dell'evaporazione attraverso il dato utilizzato per il Piano Stralcio Direttore di Bacino ovvero:

curva specchio liquido: $S=0.216 V^{0.688}$

altezza annua di evaporazione: 1.5 m

gen	feb	mar	apr	mag	giu	lug	ago	set	ott	nov	dic
0.033	0.038	0.057	0.066	0.103	0.123	0.165	0.152	0.104	0.069	0.055	0.038

- Dai risultati del confronto sull'evaporazione sono emersi i seguenti dati medi del periodo

	Evap.	Evap. PdB
min	2.20	1.86
media	3.45	3.32
max	4.43	4.64

- L'effettuazione del bilancio è stata effettuata su base mensile

OLAI

◆ *Dati grezzi messi a disposizione*

Curva d'invaso	<input checked="" type="checkbox"/>
Curva specchio liquido	<input type="checkbox"/>
Quote d'invaso	<input checked="" type="checkbox"/>
Volumi d'invaso	<input type="checkbox"/>
Erogazioni alle utenze	<input checked="" type="checkbox"/>
Evaporazione	<input type="checkbox"/>
Scarichi	<input type="checkbox"/>
Sfiori	<input type="checkbox"/>

- Curva d'invaso con passo unitario di 2 m
- Quote d'invaso con passo giornaliero per il periodo completo 16 Gen 01 – 31 Dic 03. Per gli anni 1999 e 2000 il dato si presenta frazionato, incompleto e irregolare
- Erogazioni mensili alle utenze per il periodo Gen 96 – Dic 03

◆ *Considerazioni*

- Mancanza di dati primari importanti e inconsistenza del periodo di osservazione

◆ *Risultati*

Non sembra possibile operare una ricostruzione significativa del bilancio

SOS CANALES

◆ *Dati grezzi messi a disposizione*

Curva d'invaso	<input checked="" type="checkbox"/>
Curva specchio liquido	<input type="checkbox"/>
Quote d'invaso	<input checked="" type="checkbox"/>
Volumi d'invaso	<input type="checkbox"/>
Erogazioni alle utenze	<input checked="" type="checkbox"/>
Evaporazione	<input type="checkbox"/>
Scarichi	<input type="checkbox"/>
Sfiori	<input type="checkbox"/>

- Quote d'invaso con passo giornaliero per il periodo 1 Gen 92 – 31 Dic 03
- Erogazioni giornaliere dal 1 Gen 92 al 31 Dic 94
- Erogazioni giornaliere mese di Giu 98
- Erogazioni giornaliere dal 1 Gen 01 al 31 Dic 03
- Erogazioni mensili dal 1 Gen 92 al 31 Dic 03 con la sola eccezione del mese di Mag 96
- Curva d'invaso con passo unitario di 1 m

◆ *Considerazioni*

- Dall'analisi dei livelli si desume il raggiungimento della quota di massimo invaso nei seguenti periodi: Gen-Mag 92, Apr 93, Gen-Mar 94, Mar-Mag 96, Mar-Apr 03

◆ *Risultati*

Non sembra possibile operare una ricostruzione affidabile del bilancio alla sezione dello sbarramento essendo assenti scarichi e/o sfiori.

TORREI

◆ *Dati grezzi messi a disposizione*

Curva d'invaso	<input checked="" type="checkbox"/>
Curva specchio liquido	<input type="checkbox"/>
Quote d'invaso	<input checked="" type="checkbox"/>
Volumi d'invaso	<input type="checkbox"/>
Erogazioni alle utenze	<input checked="" type="checkbox"/>

Occorre sottolineare che la consueta procedura non risulta canonicamente applicabile per la sezione in questione. Infatti il caso relativo all'assunzione del CV corrispondente al minimo annuo verificatosi non è mai raggiungibile. Il minimo annuo di 39,67 Mmc risulta totalmente fuori scala e non ottenibile mediante riduzioni degli scarti quadratici inferiori o uguali ad uno.

Si evidenzia inoltre che per l'ipotesi di riduzione della media a 0,45 il CV ottimale è dedotto in corrispondenza di una riduzione dello scarto pari a 0.80 ovvero vengono verificate le condizioni dell'ipotesi del PdB.
